Why Partner With Digitot

Dedicated, professionally trained stocktaking teams.

A proven **digital platform** purpose-built for accurate, efficient stock counts.

Minimal disruption to day-to-day operations during the stocktaking process.

Transparent, data-driven reporting that supports loss prevention and profit protection.

A scalable service suited to single sites or large, multi-site operations.

Overview

Digitot is introducing a fully managed, on-site digital stocktake service designed to give your business complete confidence in the accuracy of its inventory. Our trained stocktaking staff attend your site in person and conduct the entire count using the Digitot digital platform, capturing stock data directly, accurately, and in real time. The result is a stocktaking process that is faster, more reliable, and far less prone to the errors and losses associated with manual, paper-based counts.

Accurate & Consistent Stocktakes

Our digital stocktake service pairs experienced, dedicated stocktaking personnel with the Digitot software platform to deliver a seamless, end-to-end inventory count. Key features of the service include:

- ✓ **On-site stocktaking** conducted by trained Digitot staff, removing the burden from your internal team.
- ✓ **Real-time data capture** directly into the Digitot platform, eliminating manual data entry and transcription errors.
- ✓ **Integrated variance and discrepancy reporting**, enabling rapid identification of shrinkage and loss.
- ✓ **Consistent, repeatable processes** that ensure accuracy and comparability across every stocktake cycle.
- ✓ **Actionable reporting and analytics** to support informed purchasing, pricing, and loss-prevention decisions.

Our Implementation Process

Every engagement begins with a structured setup phase, carried out on-site by our trained staff. Depending on the size and complexity of the customer's inventory, this setup typically takes between one and three days and includes:

Detailed **capture and configuration** of every stock item, including product densities and units of measure, to ensure precise, consistent counting.

Stocktake Program

Once all data has been captured and verified, our experienced technicians conduct a thorough, professional stocktake on-site. This initial count establishes an accurate opening stock balance, providing the foundation from which all future stocktakes and variance reporting are measured.

From this opening balance, clients can select a stocktake cycle that best suits their operational needs:

Weekly

Monthly

Quarterly

Half-Yearly

Annually

Each stocktake identifies variances between expected and actual stock levels, helping clients pinpoint precisely where stock is being lost or stolen. Every stocktake is accompanied by a detailed report, complete with graphical analysis, giving clients clear visibility into what is happening within their business. This ongoing insight enables clients to minimize shrinkage, prevent theft, and reduce losses caused by human error.

Business Benefits

Reduced

Stock Loss & Shrinkage

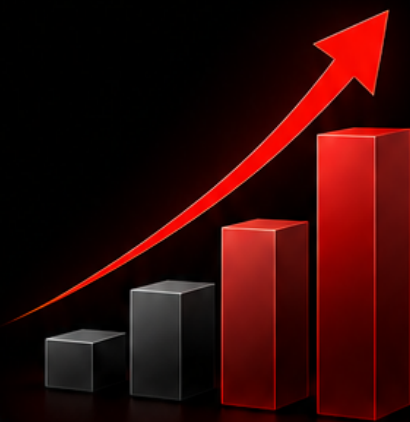

Improved

Inventory Accuracy

Increased

Client Profitability

By minimizing stock loss and shrinkage, our clients are able to protect and maximize their profit margins. Accurate, real-time stock data also supports better decision-making across procurement, merchandising, and financial planning, giving management full visibility and control over inventory performance.

Difference

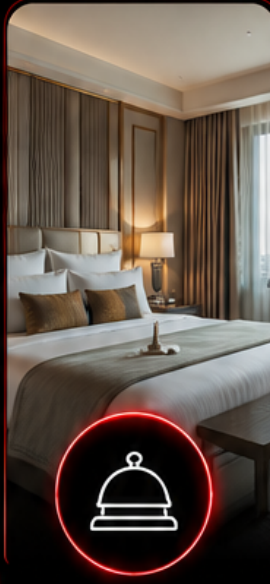

At Digitot, we combine skilled people, smart technology, and proven processes to deliver stocktaking you can trust. The result is clarity, control, and confidence in your inventory.
